

1. A CPU's clock speed is measured in _____.
(a) Gigahertz (b) bits/ bytes per second (c) megahertz (d) both A and B
2. A computer that cannot make a other computers and provide access to resources like printers,internet,files and programs is called a _____.
(a) Mainframe (b) server (c) utility (d) device driver
3. The speed of don't matrix printer is measured in _____.
(a) Lines per inch (b) lines per second (c) character per second (d) character per inch
4. A tiny piece of silicon which has electric circuits on it is called _____.
(a) wafer (b) chip (c) bit (d) memory
5. Which of the following storage device can be used for backup ?
(a) Processor (b) RAM (c) ROM (d) RAM
6. Punch cards were used for _____.
(a) Computer networking (b) data analysis
(c) satellite communication (d) radio transmission
7. Which one of the following technologies associates itself with the fourth generation computers ?
(a) Artificial intelligence (b) VLSI (c) integrated circuits (d) VAI
8. _____ super computer was the 1st machine to defeat the world chess champion, Gary Kasparov
(a) PARAM 8000 (b) Deep Blue (c) Yuva II (d) Anurag
9. Which of the following is an optical storage device that stores data using microscopic pits by dividing a single spiral track into several sectors ?
(a) CD (b) floppy disk (c) hard disk (d) flash drive
10. In Windows Explorer, the _____ on the left side shows the folder hierarchy on your computer. This can be switched ON or OFF.
(a) Navigation pane (b) file list (c) details pane (d) address bar
11. As soon as Windows starts up and you log in, you see the _____.
(a) Icon (b) folder (c) desktop (d) logo
12. Which of the following is NOT present in 'Shut Down' menu of Start button ?
(a) Hibernate (b) sleep (c) log in (d) lock
